Marking a turning point...

Happy Holidays from ARCC

As 2015 concludes, we reflect on our significant advancements.

Over the past year ARCC has:

- Signed up our 700th member to our network of researchers, clinicians, decision & policy makers, trainees, and other cancer system stakeholders.
- Hosted Canada's 4th Applied Research in Cancer Control Conference - another successful conference, featuring over 150 participants from across Canada and 30 oral and 48 poster presentations. Canada's next **Applied Research in Cancer Control Conference** will be on May 8-9 2016 in Toronto, Ontario.
- Connected investigators from various disciplines to share diverse ideas, formulate creative research projects, and develop successful grant applications.
- Expanded our web and social media presence by increasing communications through the **ARCC website** as well as our **LinkedIn** group, and Twitter account **@CC_ARCC** – we have over 240 followers on twitter!
- Bid a heartfelt farewell to Dr. Jeffrey Hoch, one of our founding co-Directors, and welcomed Dr. Kelvin Chan as our new co-Director.

We are excited for the new year, where we will implement several new strategies to help you get the most out of your ARCC Membership including:

- Providing research summaries of ARCC related articles and reports on our website
- Revamping the ARCC program areas and their information on our website
- Facilitating connections between junior and senior ARCC members

We are making improvements across the cancer control spectrum in prevention, screening, diagnosis, treatment, rehabilitation, survivorship, palliative care, and end-of-life care. We look forward to 2016 and continuing to be a resource for research and knowledge in health economics, services, policy and ethics in cancer control.

On behalf of the ARCC team, we appreciate your support and interest. We look forward to continuing our successful working relationship. Wishing you a Happy Holiday Season and all the best for 2016.

*Sincerely,
Jeffrey, Stuart & Kelvin*

Happy Holidays
