Costs of Cervical Cancer Treatment: Estimates from Ontario, Canada

Ciara Pendrith, MSc

Amardeep Thind, MD, PhD

Greg Zaric, PhD

Sisira Sarma, PhD

May 25th, 2015

Agenda

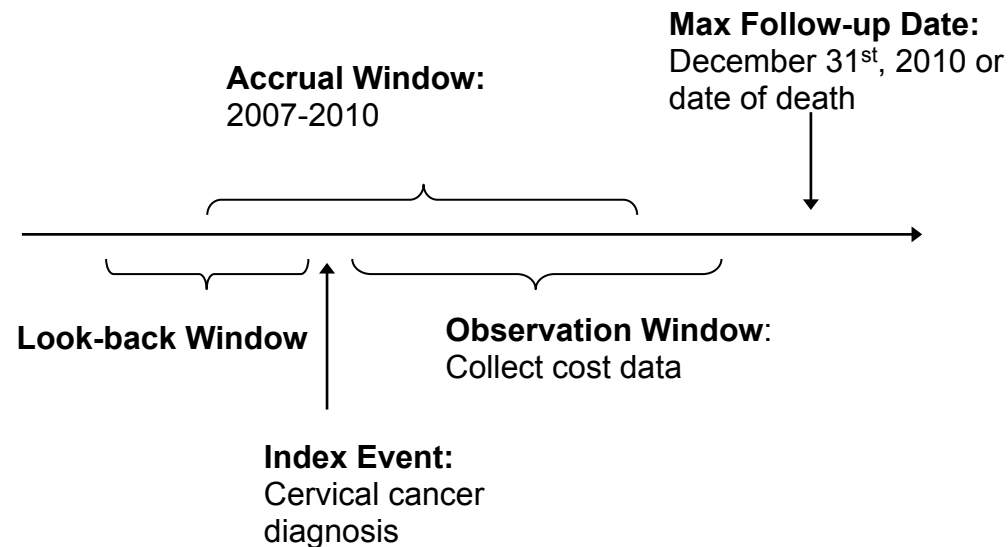

- Cervical cancer epidemiology
- Methodology
- Results
- Discussion

Background

- Cancer is leading cause of death in Canada
- Direct cost: \$4 billion
- Cervical cancer is the third most common female cancer worldwide
- Second leading cause of cancer death in Canadian women 20-44

Cohort Selection

Cervical cancer cases in the Ontario Cancer Registry linked to administrative databases held at the Institute for Clinical Evaluative Sciences (ICES)

Data Sources

Database

Ontario Health Insurance Plan claims database

Canadian Institute for Health Information (CIHI) Discharge Abstract Database

CIHI National Ambulatory Care Reporting System

CIHI Same Day Surgery

CIHI Continuing Care Reporting System

CIHI National Rehabilitation Reporting System

Home Care Database

Ontario Drug Benefit

Ontario Mental Health Reporting System

Resources

Physician services, diagnostic tests, lab tests

Inpatient hospital admissions

Cancer clinic visits, emergency department visits

Same-day surgeries

Complex continuing care services

Hospital admissions for rehabilitation services

Home care services

Prescription drugs to eligible patients

Admissions for mental health stays

Analyses

Arithmetic Mean

$$\hat{\mu} = \frac{1}{n} \sum_{i=1}^n M_i$$

Simple Weighted Estimator

$$\hat{\mu}_{WT} = \frac{1}{n} \sum_{i=1}^n \frac{\Delta_i M_i}{\hat{K}(T_i)}$$

Improved Estimator

$$\hat{\mu}_{IMP} = \frac{1}{n} \sum_{i=1}^n \frac{\Delta_i M_i}{\hat{K}(T_i)} + \frac{1}{n} \sum_{i=1}^n \frac{(1 - \Delta_i) \{M_i - \overline{M(C_i)}\}}{\hat{K}(T_i)}$$

$$\overline{M(C_i)} = \frac{\sum_{j=1}^n I(X_j \geq M_j(C_j))}{\sum_{j=1}^n I(X_j \geq C_i)}$$

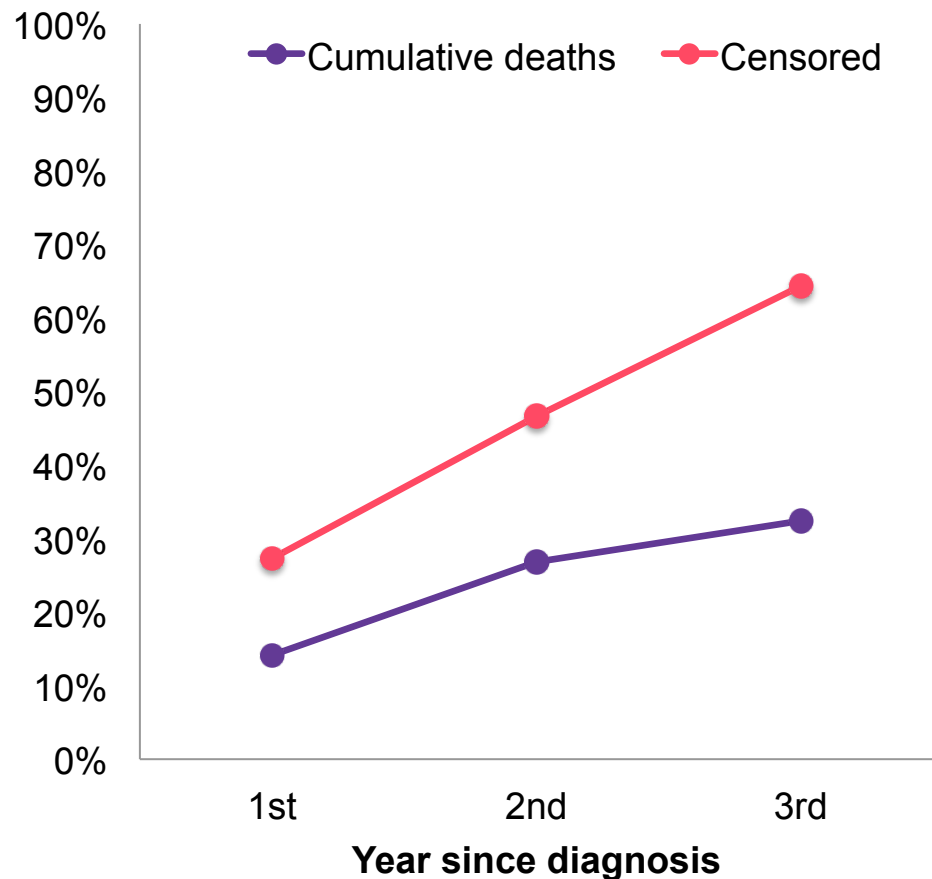

Study Cohort

N = 784

Mean age = 49.3

254 deaths in study period

- 71% caused by cervical cancer

1-year costs by vital status

Breakdown of 1-year costs

Survived \geq 1 year

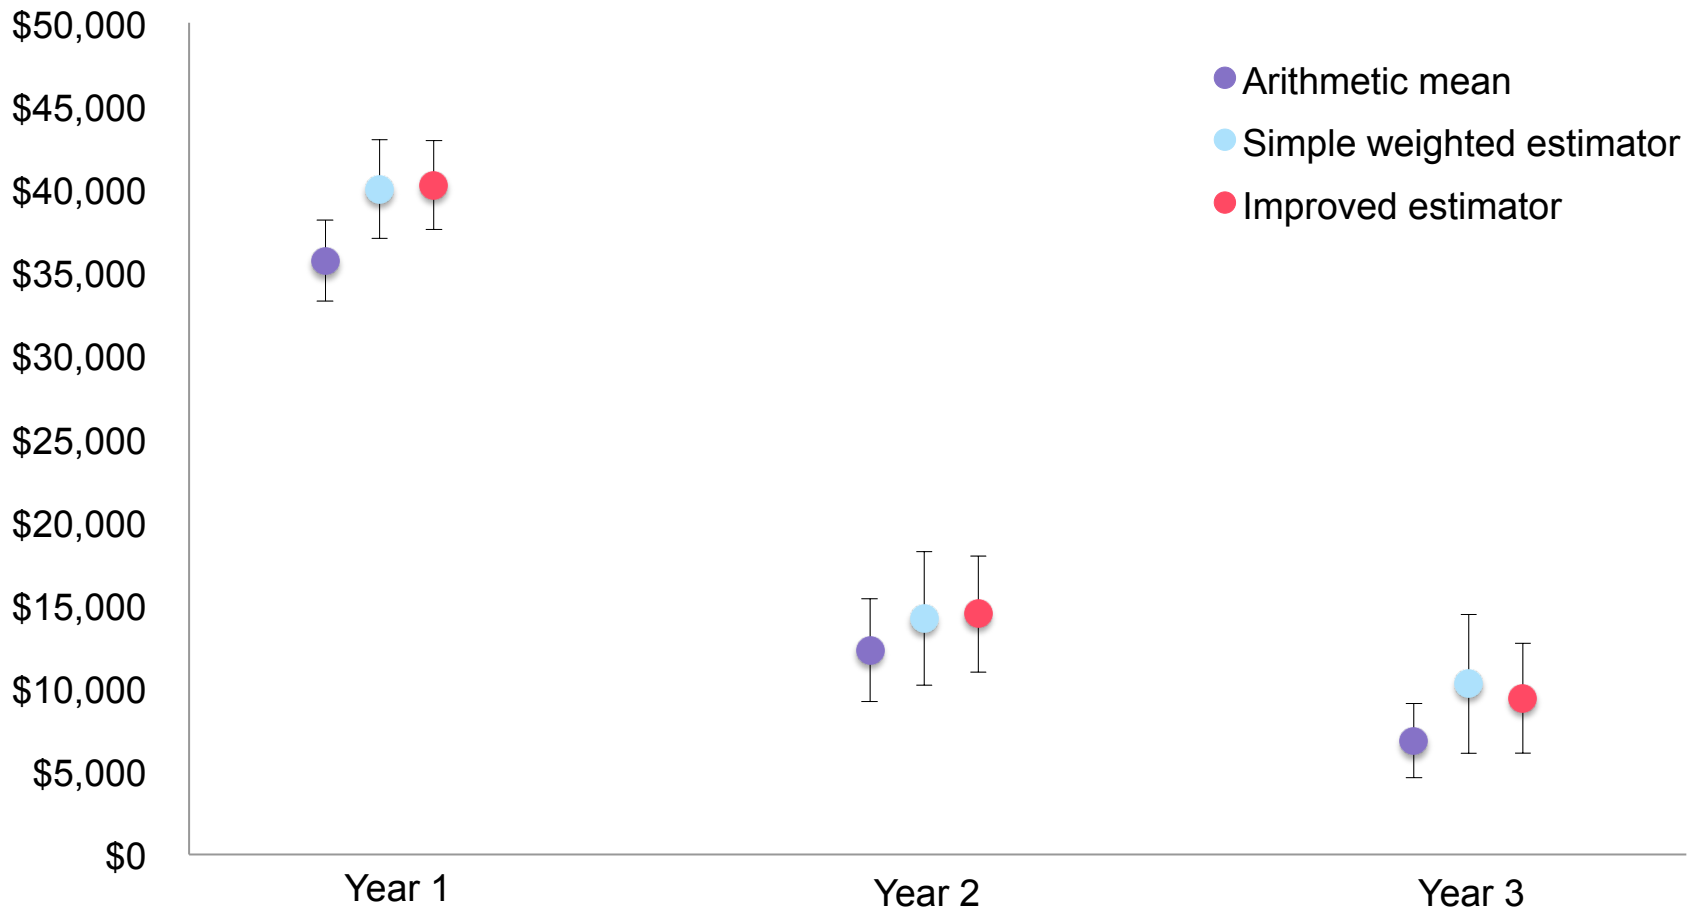

Died within 1 year

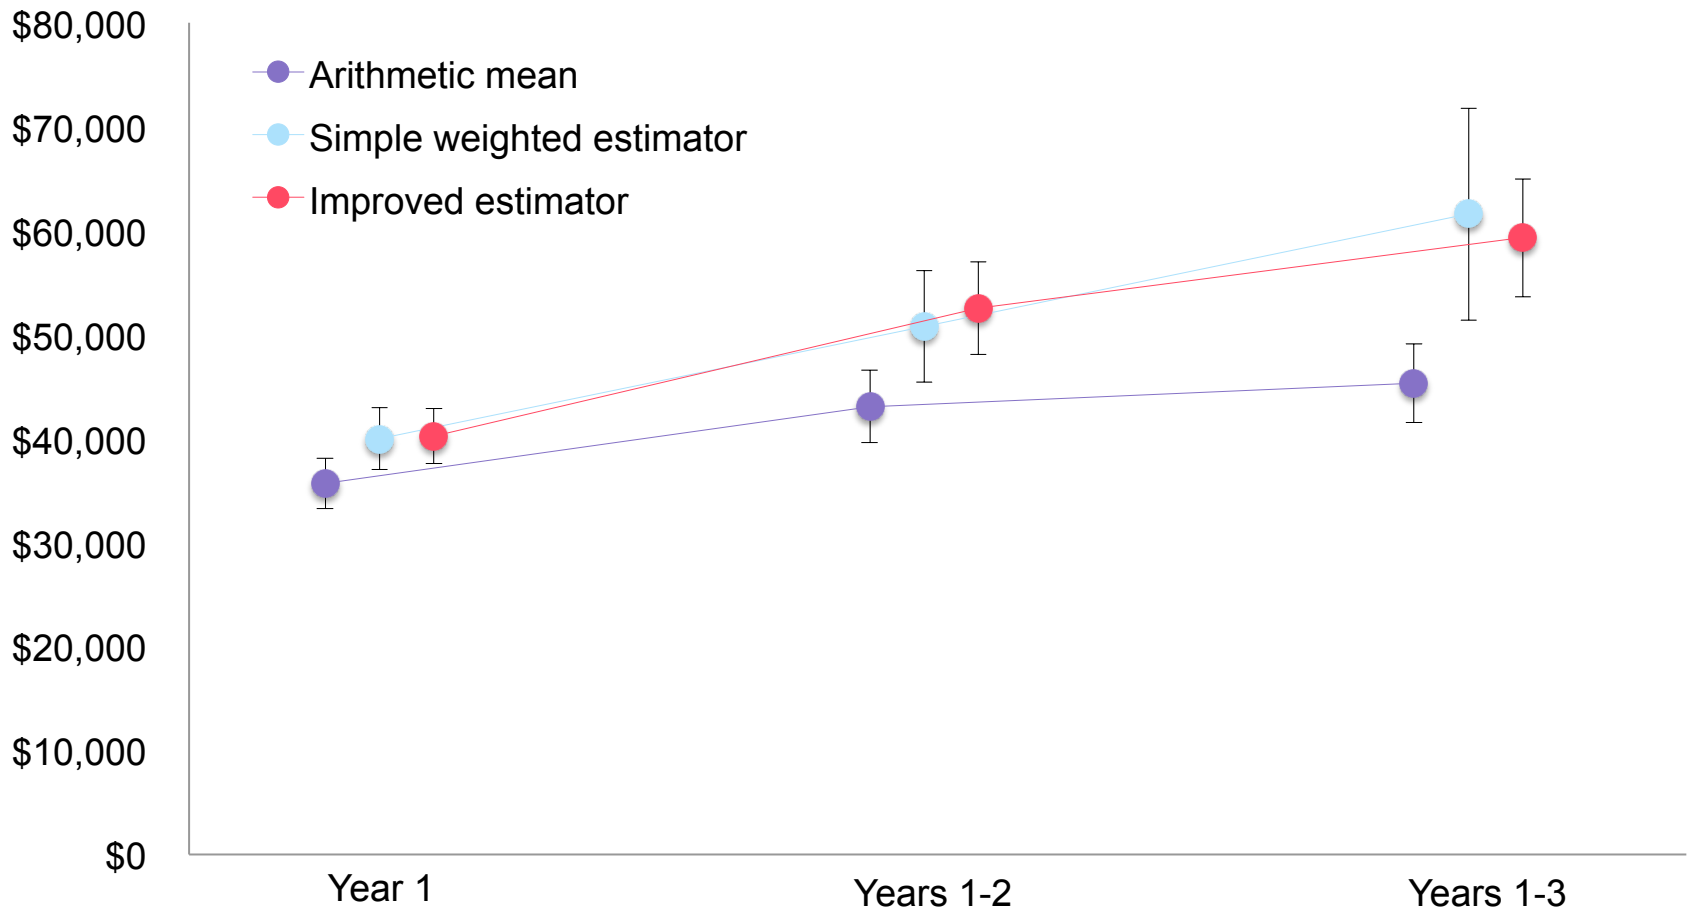

- Cancer clinic
- Inpatient
- Other hospital
- Tertiary care
- Physician
- Other

Mean annual costs

Mean cumulative costs

Limitations

- No staging data
- Unable to compare costs across treatments
- Overall healthcare costs vs. incremental cancer costs

Conclusions

- Greatest cost accumulation in first year after diagnosis
- Patients that died had much higher costs
- Cancer clinic and hospital admissions were two largest drivers of cost

Acknowledgements

Funding for this research by the Canadian Institutes of Health Research Operating Grant MOP-130454 (Do primary care reforms influence physician performance and patient outcomes? Econometric analyses of Ontario's primary healthcare delivery models) is gratefully acknowledged. This study was supported through provision of data by the Institute for Clinical Evaluative Sciences (ICES) and Cancer Care Ontario. We would like to thank Dr. Salimah Shariff and ICES Western for access to conduct these analyses and Dr. Rick Glazier, Alex Kopp and Nathaniel Jembere from ICES Central.
